

H2O COAT 1000ML - 5L

Description:

INSTANT HYDROPHOBICITY BOOSTER.

H2O ensures immediate hydrophobicity immediately after car cleaning when the car is still wet, also with a foam nozzle to complete the "touchless" treatment of the vehicle without the use of cloths or pads, thus avoiding the formation of swirls and facilitating drying. H2O creates a chemical barrier on paint, plastics, metal finishes, rims and glass, making it possible to prolong the effect of the protective layers of coatings and waxes, providing brightness and silkiness to the surface. Its special particles adhere quickly to the surface, protecting it from chemical agents, "bird drop" and making it water-repellent and easier to clean.

Directions for use 1000ml:

Shake before use. After washing and decontaminating, while the car is still wet, spray from the bottom upwards from a distance of 60 cm to obtain a wide spray. In the summer, pre-dilute 1:1, or 1:3 for pre-treated cars (one part product and one part water). After 15 seconds rinse the car and then dry with air or a microfibre cloth. Do not allow the product to dry on the surface and, possibly, treat one panel at a time, if used pure. After H2O you can use W1 and C1.

Consumption:

80ml/car

Use combinations:

Rinse the car and then dry with air or a microfibre cloth. After H2O you can use W1.

Warnings:

Do not allow the product to dry on the surface and, possibly, treat one panel at a time, if used pure.

To handle the product follow the precautionary advice on the safety data sheet.

Technical features:

Appearance and colour: pink liquid

Odour: characteristic

pH: 6,5 ± 0,5

Flash point: >100 °C

Relative density: 0,98 g/cm³

Solubility in water: soluble

Solubility in oil: not soluble

Storage:

Unopened and stored at room temperature away from direct sunlight.

Packaging:

PACKAGING	BOX	ITEM CODE
1000 ml	4 pcs	79304
4,5 L	4 pcs	79788
